Assetto Corsa SIM TRAXX

AC Content Manager + SOL

QUICK GUIDE

1.Installing tracks

2. Installing Assetto Corsa Content Manager

3. Installing SOL weather system

4. Setting up best recommended visuals and functionality

**5. Running a track and setting up essentials (Single Player)**
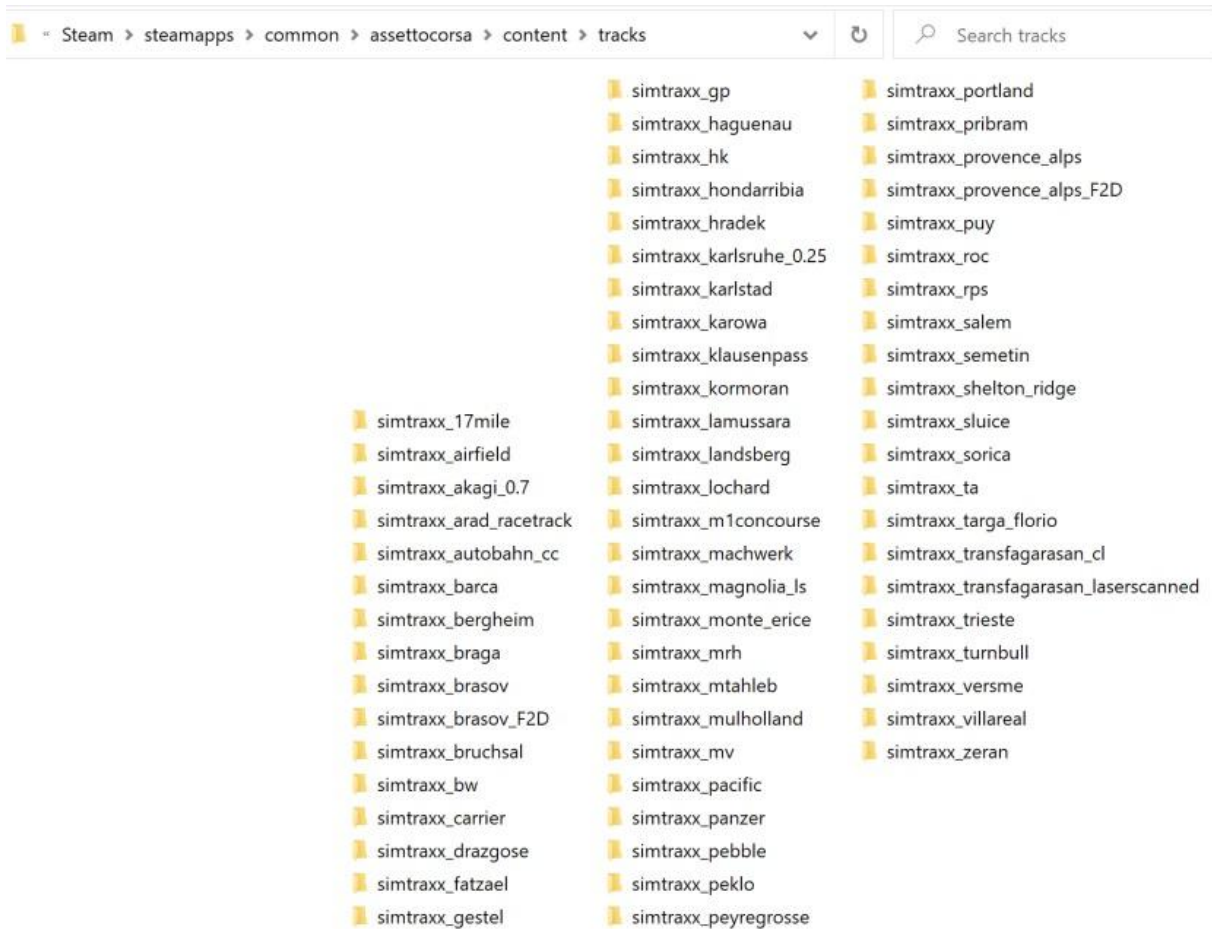

1.Installing tracks:

Download packed track files and unpack with unpacking software to folder: assettocorsa/content/tracks

if You are installing a track update then make sure You don't have an old version of the track in the TRACKS folder

***we recommend using 7zip for unpacking*

You can UNPACK by dropping the track folder to TRACKS folder

2. Installing Assetto Corsa Content Manager

Go to: **https://assettocorsa.club/content-manager.html**

Scroll down to:

Download Content Manager

Program is available in two versions, Lite and Full. Lite version has restricted access to new features, WIP-sections and pre-release builds.

Download Lite Version:
Download directly
Download from Google Drive

To unlock Full program version you need to transfer any amount of money using one of the following system:

Support us:

By transferring money, you will not only get Full version of Content Manager, but also will support the whole project AssettoCorsa.club and will contribute to its further development.

Attention! After money transfer, we will send your personal key to e-mail address, linked to PayPal or Itch.io. Please, do not tell it to anyone, otherwise it could be recalled. Key is sent automatically, so if anything goes wrong and you will not receive the key after 12 hours (don't forget to check your spam folder), or if you have any other questions, write to us:
assettocorsaclub@gmail.com

Download the Lite version and unpack to any folder outside of Assetto Corsa main folder.

Run Assetto Corsa Content Manager using exe file.

Optional: Support development of improvements by donating.

If You do this then You will also get access to some additional Content Manager features.

3. Installing SOL weather system

Go to: **https://www.racedepartment.com/downloads/sol.24914/**

Download the packed files (make sure You are logged in to Race Department)

Open the file and get deeper into folder called: Sol   1.62 + 1.5.5

Unpack the folders for example by dropping them into Assetto Corsa main folder and replacing all files when asked (make sure to backup Your Assetto Corsa folder before)

4. Setting up best recommended visuals and functionality

Run Assetto Corsa Content Manager

Head to **SETTINGS: ASSETTO CORSA: VIDEO**

and set Your Post Processing filter (PP filter)

We recommend using _Sol_Extra as a fast good choice but there are many other custom made out there that You may like as well

Other settings depend on Your needs and PC specifications.
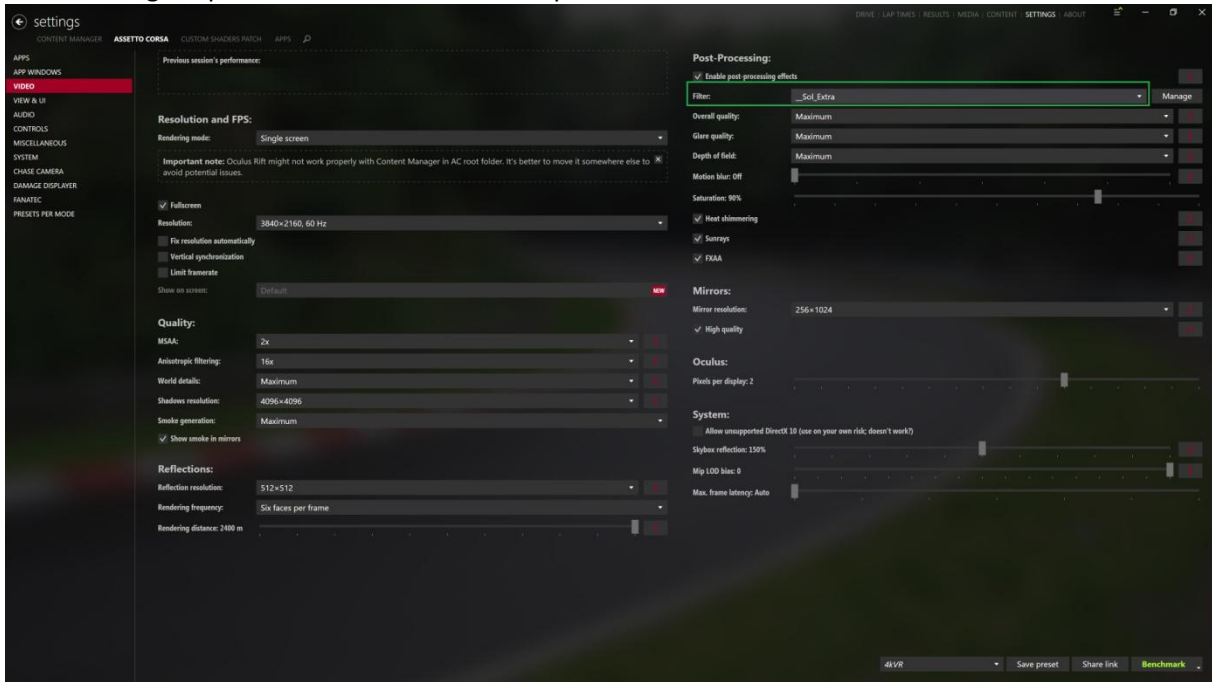

Next step is to go to **SETTINGS: APPS**

Make sure to tick main boxes at Sol Config and Sol Weather App

SIM TRAXX Assetto Corsa QUICK GUIDE /https://www.simtraxx.net/ release 1 / 08/2020

Now go to **SETTINGS: CUSTOM SHADERS PATCH: GRASS FX**

Tick the box Active and choose Quality level

Depending on Your PC specifications You can try to tick all the boxes and also choose Very high Quality setting
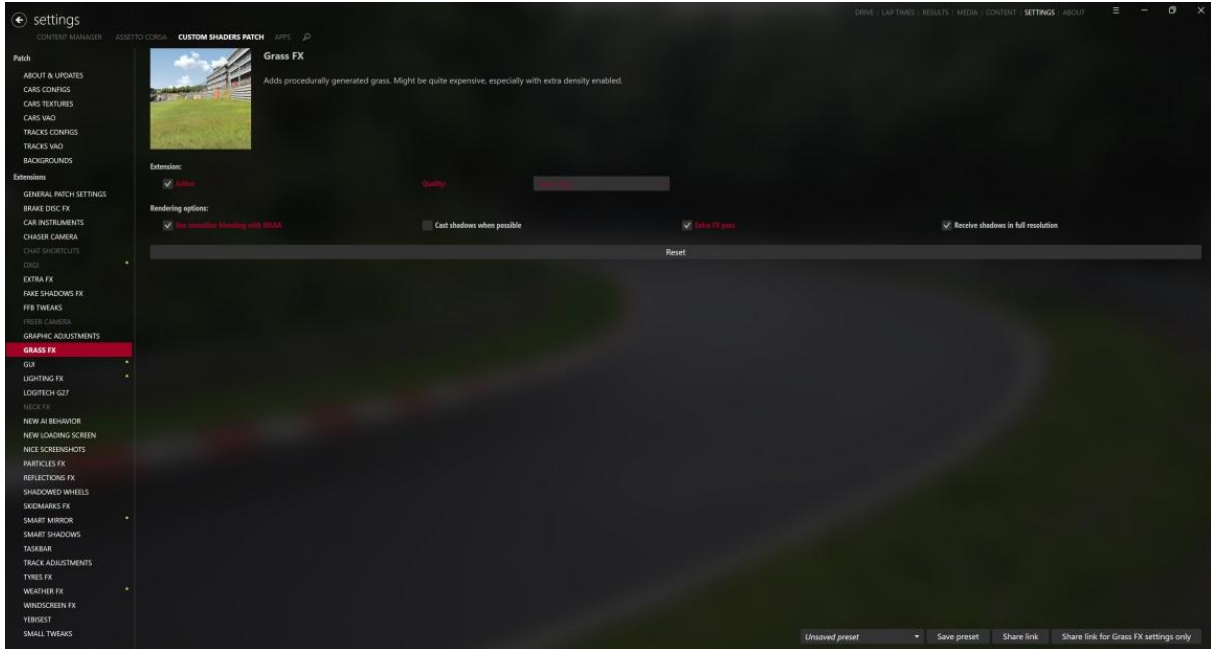

Now go to **SETTINGS: CUSTOM SHADERS PATCH: ABOUT & UPDATES**

Choose CSP version. We recommen testing newest versions possible. You can always downgrade if needed.

5. Running a track and setting up essentials (Single Player)

Choose **DRIVE: SINGLE: QUICK**

A. Choose which mode You want to use:

**1. PRACTICE** (all tracks work in this mode)

2. HOTLAP (some tracks need to be soon updated to work in this mode)

3. RACE (some tracks need to be soon updated to work or are not suited for this mode)

4. TRACK DAY (some tracks need to be soon updated to work or are not suited for this mode)

5. WEEKEND (some tracks need to be soon updated to work or are not suited for this mode)

6.DRIFT (some tracks need to be soon updated to work or are not suited for this mode)

7.TIME ATTACK (some tracks need to be soon updated to work or are not suited for this mode)

B. Choose Your car, level of Grip, Temperature, Assists, Weather

Also setup **Time** (by clicking 3 tiny squares in the top section You can choose which day and hour You want to drive -> however this can be also changed in real time while driving when using **Sol Weather and Sol Plan Selector apps**)

C. Run the track by clicking **GO** in the right down corner

SIM TRAXX Assetto Corsa QUICK GUIDE /https://www.simtraxx.net/ release 1 / 08/2020
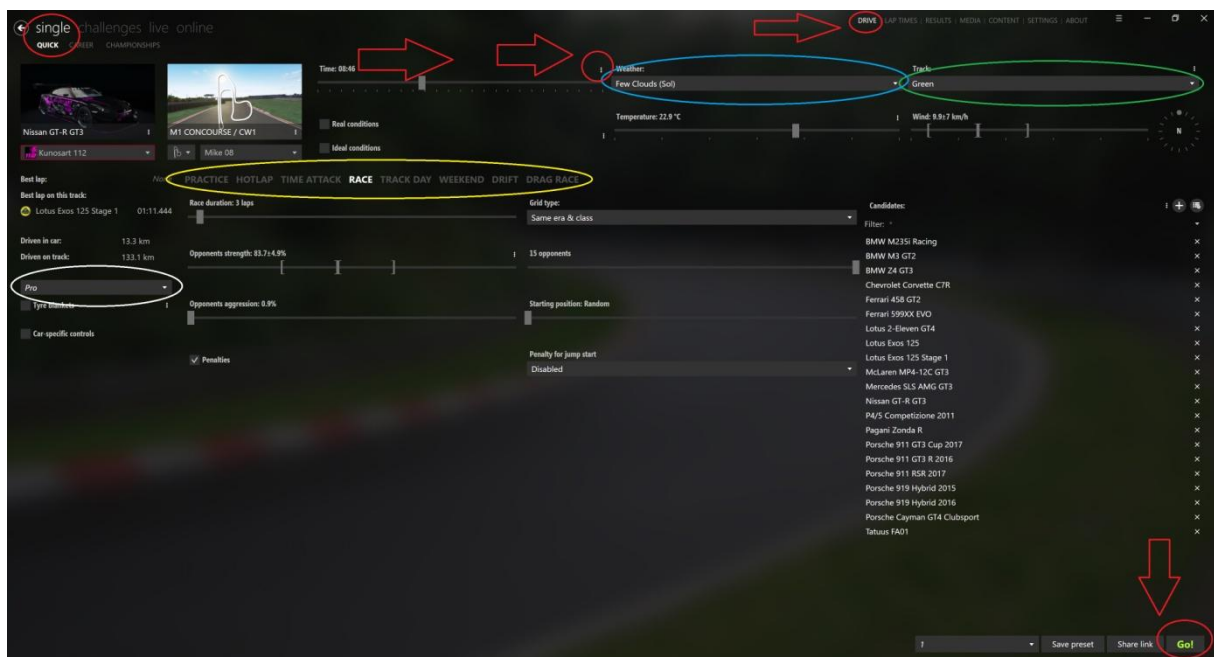

D. While already in the simulation move cursor to the far top right and click both **Sol Weather and Sol Plan Selector apps**. Now You can be the master of Your own weather and change options in real time when using these apps.

E. Wet conditions: water puddles,rain fx and physics are still work in progress and will be added soon. Some of our tracks already have the visual effects working but they require internal CSP patch 1.63

F. Night lighting of the track: Some of our tracks have night lighting working already, some will be updated soon

SIM TRAXX Assetto Corsa QUICK GUIDE /https://www.simtraxx.net/ release 1 / 08/2020

more info and improvements soon. work in progress

thanks for supporting!
